PROJECTS

RESUME ANALYZER & JOB RECOMMENDATION BACKED SYSTEM

Developed a backend-based Resume Analyzer and Job Recommendation System that processes resumes, extracts candidate skills, stores structured data in MySQL, and recommends relevant jobs using Spring Boot REST APIs and skill-matching logic.

- Developed a Resume Analyzer and Job Recommendation System using Java, Spring Boot, REST APIs, Hibernate, and MySQL.
- Built REST APIs for resume upload, parsing, skill extraction, and job recommendation workflows.
- Implemented text normalization, duplicate removal, and skill matching logic for accurate recommendation processing.
- Designed scalable layered architecture using Controller-Service-Repository pattern with JPA/Hibernate integration.

Tools & Technologies: Java, HTML, CSS, Bootstrap, Javascript, Spring Boot, Spring Data JPA, MySQL, Maven, Lombok, Apache Tika, API Testing(Postman), JUnit

HOSTEL MANAGEMENT API

Hostel Management API is a RESTful Java Full Stack application that manages hostel operations, including blocks, wings, and rooms. It ensures data integrity, enforces room capacity, and supports secure student management with scalable API design.

- Developed RESTful APIs using Java, Spring Boot, and Spring Data JPA for backend data management.
- Designed normalized MySQL database schema with validation and business logic constraints.
- Implemented exception handling and scalable layered architecture for maintainable backend development.
- Tested APIs using Postman to ensure reliability and performance.

Tools & Technologies: Java, Spring Boot, Spring Data JPA, Hibernate, MySQL, Maven, Postman
